

Optimizing HR one click at a time

The big shift: QuickHR's 'less paper, more people' solution

QuickHR presents users an extremely user-friendly interface that can automate any company's entire HR work with a few mouse clicks.

Singapore's Saintmarc South East Asia's old server-based human resource platform made hiring new employees a tedious process. Not only was its antiquated system inflexible, it also limited the company's growth and profitability. Following the move to go digital, Saintmarc adopted QuickHR, a cost-effective solution that has helped boost the company's overall productivity.

Chris van Dompelaar, SaintMarc's Head of Finance and Human Resource noted that QuickHR's cloud-based system has made HR management easier and more convenient for the company. "Our previous HR platform was server-based in the office. Once a payroll mistake has been made, we have to restart the process all over again."

Sukhveer Bajaj, QuickHR's Chief Executive Officer said that its HR management platform is a solution 'that anyone can master'.

"This is especially helpful," Bajaj said, "for companies like Saintmarc that has a small HR team. In many SMEs that we have served, resources are often limited and it's usually a 'one man show'. You'll be surprised to see

I have access anywhere I need. If there is a need to extract certain data, I can do it anytime and anywhere.

that there are even larger companies with a significant number of head count who operate with a small HR team."

Less paper, more people
 As a cloud-based Software-as-a-Service (SaaS) solution, QuickHR gives clients the 'flexibility and scalability' to run their business. By hosting its data on Amazon Web Services (AWS), the largest cloud

infrastructure in the world that's secured with multi-tier encryption technology, QuickHR also ensures that clients get to enjoy a secured solution at a low cost. By going paper-free, Bajaj said that "HR departments can now focus on less paper, more people."

"It doesn't matter if you're just an admin in your start-up or a HR Director in a large corporation; as long as you use QuickHR, you will be able to solve all of your HR concerns," he expressed.

Since QuickHR is cloud-based, this has given Saintmarc South East Asia the freedom to allocate funds to other needs instead of upgrading storage infrastructure every year. "Such infrastructure is rigid, expensive and security can be a concern. Once the storage space is used up, businesses would have to spend more money to purchase more information storage space," explained Bajaj.

QuickHR's built-in payroll module also gives it an edge over other similar HR management systems. Besides an extremely user-friendly interface, it is also integrated with award-winning accounting software such as Xero and QuickBooks Online. QuickHR now offers an all-in-one management solution that allows clients to use it for more than just HR. It also has an in-built CPF calculator, auto computation of allowances, deductions, overtime pay, basic salary, gross salary, funding, and donations.

Disrupting HR departments, one solution at a time

QuickHR is a disruptive tool here to help HR departments focus on less paper and more on their people. Through a cost-efficient, user-friendly and people-centric model, QuickHR ensures that businesses can go digital without a steep learning curve. With a few mouse clicks, businesses can now remove paper from the equation and focus on their most important asset — its people.

QuickHR's cost-effective programme allows businesses to invest in other more pressing needs. QuickHR even allows companies to monitor and manage their employees anytime, anywhere, allowing flexibility and efficiency in allocating tasks and projects.

The HR management platform is hosted on Amazon Web Services (AWS), the largest cloud infrastructure in the world also used by corporations such as Instagram, Netflix, Hulu, and McDonald's. With AWS's SSL encryption and QuickHR's multi-tier encryption technology, company data is secured and stays compliant with the PDPC Act.

Enabling companies with a safer and more secure solution
